Prerequisites Guide for Security Copilot in Entra Training

Security Copilot & Entra Setup checklist

1. Security Compute Units (SCUs) are available
2. Permissions to Security Copilot are granted
3. Required Permissions to install and run Entra Agents are granted
4. Entra Agents are set up, enabled, and have **run at least once**, prior to the lab session
5. Optional permissions in Entra for Entra scenarios are assigned

Security Copilot Prerequisites

Before the workshop, participants **must complete** the following steps to follow along and participate:

1. Please make sure Security Copilot is enabled in your tenant, and you can use it in Microsoft Entra.
 - a. Setup Security Copilot for Entra ([Security Copilot in Microsoft Entra | Microsoft Learn](#))
 - b. If it's already setup in your tenant, verify it by trying to use Security Copilot in the Entra Portal <https://entra.microsoft.com>.
2. For this workshop, we recommend 5-10 SCUs to be able to complete most exercises.

Provision Security Compute Units (SCUs)

- SCUs are required to run Security Copilot.
- Minimum: **5 SCUs** (recommended: **10 SCUs**) for labs training.
- SCUs are billed hourly and can be managed via the Azure portal or Security Copilot portal.

Assign Roles

If Security Copilot is enabled but you cannot use it, you may need additional permission. Ensure appropriate roles are assigned:

- Security Copilot Contributor or Security Copilot Owner

You may also use the Recommended Security Copilot contributor roles. These roles determine access and ownership within Security Copilot. [Understand authentication in Microsoft Security Copilot | Microsoft Learn](#)

Security Copilot in Microsoft Entra Prerequisites

Security Copilot Entra open-chat Prerequisites

The various use cases in Entra have different roles and license requirements. Ensure you have the required role and license [Microsoft Security Copilot scenarios in Microsoft Entra ID | Microsoft Learn](#) for the Entra scenarios you want to try out. [Microsoft Security Copilot scenarios in Microsoft Entra overview | Microsoft Learn](#)

Important: Microsoft Security Copilot follows the Role-Based Access Control (RBAC) model used in Microsoft security solutions. When you submit a prompt, Copilot can only access the data that you have permissions for.

Security Copilot in Microsoft Entra – Lab Guide

Entra Scenarios, Roles, and licenses required:

Scenario	Role(s)	License	Tenant
Tenants	Global Reader	Any Microsoft Entra ID license	Any
Users	User Administrator	Any Microsoft Entra ID license	Any
Groups	Directory Writer Groups Administrator User Administrator	Free Microsoft Entra ID license	Any public cloud tenant with more than one group
Domains	Domain Name Administrator	Any Microsoft Entra ID license	Any
Licenses	Global Reader	Microsoft Entra ID Governance license	Any
Sign-in logs	Reports Reader Security Reader Security Administrator Global Reader	Microsoft Entra ID P1 or P2 license	Any public cloud tenant with sign-in data
Audit logs	Reports Reader Security Reader Security Administrator Global Administrator	Free Microsoft Entra ID license	Any public cloud tenant with audit activity
Recommendations	Application Administrator Identity Governance Administrator Privileged Role Administrator Conditional Access Administrator Security Administrator Hybrid Identity Administrator Authentication Policy Administrator Authentication Administrator	Free Microsoft Entra ID license or Microsoft Entra ID P1/P2 license	Any (also available in Microsoft Entra Workload ID)
Health monitoring alerts	Reports Reader Helpdesk Administrator Security Reader Security Operator Security Administrator Global Reader	Microsoft Entra ID P2 license	Any public cloud tenant
Service Level Agreement	Reports Reader	Any Microsoft Entra ID license	Any
Roles and administrators	Directory Reader Global Reader	Any Microsoft Entra ID license	Any
Devices	Any user	Free Microsoft Entra ID license	Any
Conditional Access	Security Administrator Global Reader Security Reader	Microsoft Entra ID P1 license	Any with Conditional Access policies configured
Authentication	Authentication Policy Administrator (tenant level) Privileged Authentication Administrator (user level)	Any Microsoft Entra ID license	Any

Security Copilot Entra Agent Prerequisites

Ensure that you have the required RBAC permissions to install and run the agents. [Microsoft Entra Agents | Microsoft Learn](#)

Microsoft Entra in Security Copilot Standalone Prerequisites

Ensure you can access [Microsoft Security Copilot](https://securitycopilot.microsoft.com/) (<https://securitycopilot.microsoft.com/>)

Introduction

[Estimated time to complete this lab](#)

75 Minutes

Objectives - Microsoft Security Copilot is a powerful tool that can help you manage and secure your Microsoft Entra identity environment. This guide outlines the different capabilities in Microsoft Entra that you can investigate using natural language queries. These capabilities are available across different Microsoft Entra products to enhance your identity protection efforts.

To use Security Copilot in Entra, ensure that you have a tenant with Security Copilot enabled.

Security Copilot in Microsoft Entra includes the standalone Security Copilot experience, embedded experiences in the Microsoft Entra admin center, specialized agents that can perform tasks, and natural language prompts that can be used in several end-to-end scenarios.

We've organized this lab into 3 sections:

Section 1: Open chat experience in Microsoft Entra (40 mins)

Section 2: Entra Agents in Microsoft Entra (15 mins)

Section 3: Open chat experience in Security Copilot Standalone (5 mins)

Section 1: Open chat experience in Microsoft Entra (30 mins)

Microsoft Entra ID scenarios (15 mins)

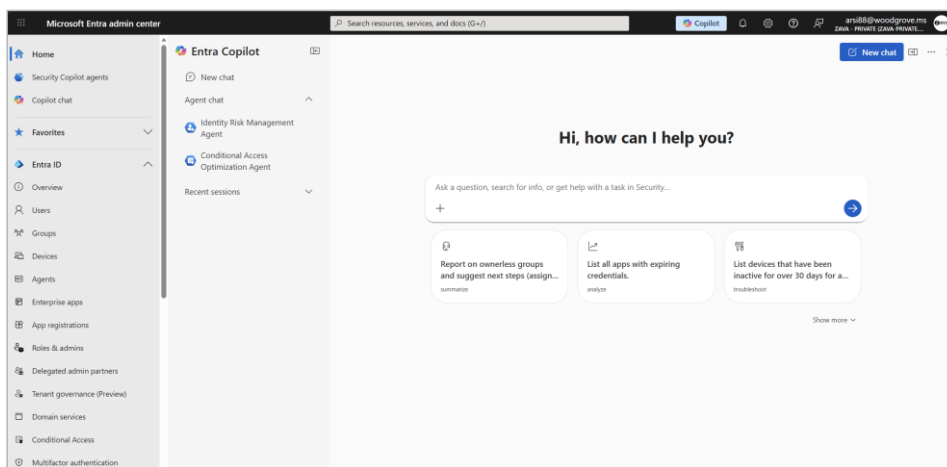

With Microsoft Security Copilot, administrators can now manage and investigate their Microsoft Entra tenants, users, groups, domains and licenses using natural language.

Exercise 1a: Enterprise User Management

Quickly manage users, tenants, groups, and licenses using natural language queries.

[Enterprise user management with Microsoft Security Copilot | Microsoft Learn](https://entra.microsoft.com/)

1. Go to the **Entra portal** (<https://entra.microsoft.com/>) and sign in with your credentials.
2. Select  at the top right side of the portal OR the “Copilot Chat” menu on the left.
3. Try out a few of the below prompts:
 - a. *What are all the active licenses assigned to my tenant?*
 - b. *Show me DNS verification records of this tenant*
 - c. *Give the member count of each department.*
 - d. *List users without assigned licenses.*
 - e. *How many users are in the Sales department?*

Exercise 1b: Security and Access Control

Use Microsoft Security Copilot to undertake a security assessment by evaluating role-based access controls, authentication methods, conditional access policies, and device compliance across an organization. [Security and access control with Microsoft Security Copilot | Microsoft Learn](#)

- 1. Try out a few of the below prompts:
 - a. Who has eligibility for the Global Reader role?
 - b. What authentication methods are enabled in my tenant?
 - c. Is report suspicious activity enabled in my tenant? For who?
 - d. How many users have the FIDO2 Security keys method registered?
 - e. Show me all non-compliant devices.
 - f. Show the count of Windows devices categorized by release.
 - g. List the Authentication Strength policies.

Security Copilot in Microsoft Entra – Lab Guide

You can now **download** your results in a CSV file.

The screenshot shows the Microsoft Entra admin center interface. On the left, there's a sidebar with navigation options. The main area displays a list of users in the United States, including their department and location. A 'Download' button is visible in the top right corner of the list.

Display Name	User Principal Name	Department	Country	Usage Location
Jar Castellanos (OPS)	jcastell@entzava-private.co	Office of the CEO	US	US

Exercise 1c: Understanding monitoring and operations

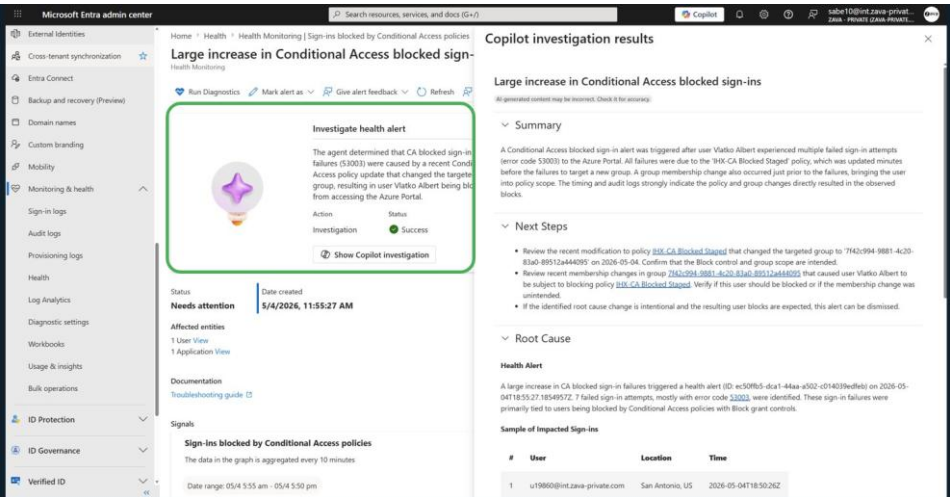

Quickly analyze sign-in activities, investigate audit logs, monitor system health, and track service performance using natural language queries. [Understand monitoring with Microsoft Security Copilot | Microsoft Learn](#)

1. Try out a few of the below prompts:
 - a. Show sign-ins without multifactor authentication.
 - b. Show sign-ins from <specific locations>.
 - c. Display risky sign-ins.
 - d. Show me recently deleted groups.
 - e. Show my tenant's historical Secure Score data.
 - f. List all Entra recommendations.
 - g. List recommendations to improve app portfolio health.
 - h. Show Entra recommendations by impact type.
 - i. Show me applications with credentials that are expiring soon.
 - j. List all active health monitoring alerts.
 - k. (NEW) Health alert investigator

The screenshot shows the Microsoft Security Copilot interface. It displays a list of recent sign-in events where multifactor authentication (MFA) was not used. The list includes columns for User Display Name, User Principal Name, Sign-in Time (UTC), and Application.

User Display Name	User Principal Name	Sign-in Time (UTC)	Application
Jens Tukaev	jtu482@woodgrove.ms	2025-10-22T23:09	Office 365 SharePoint Online
Braden Goudy (Corp)	bragou@woodgrove.ms	2025-10-22T23:08	Security Copilot

Security Copilot in Microsoft Entra – Lab Guide

Exercise 1d: Complex multi-step prompts

Address your complex tasks, by using Copilot to fetch information from multiple queries.

1. Try out a few of the below prompts:
- a. *Show me the risky users that registered a new Authentication Method in the past 14 days.*

Show me the risky users that registered a new Authentication Method in the past 14 days.

Copilot

AI-generated content may be incorrect. Check it for accuracy.

Here are the risky users in your tenant who have registered a new authentication method in the past 14 days:

User Display Name	User Principal Name	Risk Level	Risk State
Eugenia Lopez	eulo56@woodgrove.ms	High	At Risk
Vanhi Nafisa	vna548@woodgrove.ms	Low	At Risk
Braden Goudy (Corp)	bragou@woodgrove.ms	Low	At Risk

Details about the specific authentication methods registered and their registration dates are not available. This table lists 3 risky users identified in the past 14 days.

- b. *Which Auth methods were recently registered by risky users in my tenant?*

Security Copilot in Microsoft Entra – Lab Guide

Exercise 1e: Ambiguous prompts

Copilot can now resolve ambiguity, by asking you for clarification, if it finds multiple matches.

1. Try out a few of the below prompts:
 - a. Show me the last sign-in for San.

Show me the last sign-in for San.

Copilot AI-generated content may be incorrect. Check it for accuracy.

There are multiple users whose names contain "San." Please clarify which user you are interested in by providing their full display name or user principal name (UPN). Here are some matching users:

- Sandor Magyar (sama31@woodgrove.ms)
- Sang Dang (sada23@woodgrove.ms)
- Leyla Santoshi (lsa915@woodgrove.ms)
- Sandeep Milutinovic (smi954@woodgrove.ms)
- Sang Trinh (satr88@woodgrove.ms)
- Allan Sandberg (alsa69@woodgrove.ms)
- Jyldyz Sansyzbai (jsa30@woodgrove.ms)
- Jozsef Sandberg (jsa822@woodgrove.ms)
- Corey Sanchez (csa356@woodgrove.ms)
- Alesia Sandhu (asa317@woodgrove.ms)
- Sandeep Benarjee (sabe10@woodgrove.ms)
- Themba Sandagsuren (tsa387@woodgrove.ms)
- Camille San (csa936@woodgrove.ms)
- Sang Henry (she706@woodgrove.ms)
- Sanela Karzai (saka78@woodgrove.ms)
- Juan Santoshi (jsa919@woodgrove.ms)
- Hohepa Sansyzbai (hsa462@woodgrove.ms)
- Sanjar Kline (skl705@woodgrove.ms)
- Sanjay Trivedi (satr83@woodgrove.ms)
- Teo San (tsa139@woodgrove.ms)

Please specify the exact user so I can show you the last sign-in for that account.

20 matching users found.

Exercise 1f: Write actions for Copilot in Entra

Admins can now perform write actions directly from chat, like elevating JIT access without having to leave the Entra Copilot experience to gather context for making the right decision.

Every write action is validated, confirmed, RBAC-enforced, and audit-logged. Intelligent rollback and role elevation ensure least-privilege access with full traceability.

1. Try out a few of the below prompts (make sure you don't have an active role assigned):
 - a. List User sign-ins that failed in the last 24 hours

My roles | Microsoft Entra roles

Role	Scope	Membership	End time	Action
Security Reader	Directory	Direct	Permanent	Activate
Identity Governance Administrator	Directory	Direct	Permanent	Activate
Reports Reader	Directory	Direct	Permanent	Activate
Authentication Policy Administrator	Directory	Direct	Permanent	Activate

Copilot

Select one of the suggestions below to get started.

- Summarize**
Show all the audit logs from the last day
- Analyze**
List all the groups I am a member of
- Troubleshoot**
List user sign-ins that failed in the last 24 hours
- Learn**
How does Microsoft determine Risky Users?

List user sign-ins that failed in the last 24 hours

Copilot AI-generated content may be incorrect. Check it for accuracy.

You do not currently have sufficient permissions to view this information. To proceed, activate the eligible role assignment below, and then retry your request.

Here is the request I'm submitting

User: Mantia

Role: Security Reader

Deactivate Role **Cancel**

Ask a question, search for info, or get help with a task in Security...

Commented [G51]: @Rodrigo Castillo - Could you please add the context here for the write action. If there is any screenshot please feel free to add - Thank you!

b. Summarize blocked traffic and explain why it was blocked

Microsoft Entra ID Protection scenarios (10mins)

Microsoft Entra ID Protection focuses on identity risk detection and remediation. Security Copilot provides AI-powered insights for:

- Risky user investigation:** Summarize user risk levels and provide remediation recommendations
- Application risk assessment:** Analyze workload identities and application permissions

Prerequisites

Scenario	Role(s)	License	Tenant
Risky users	Security Reader	Microsoft Entra ID P2 license	Any
Application risk	Application Administrator Cloud Application Administrator	Workload Identity Premium or Microsoft Entra ID P2 license	Any with Risky Service Principal prompts

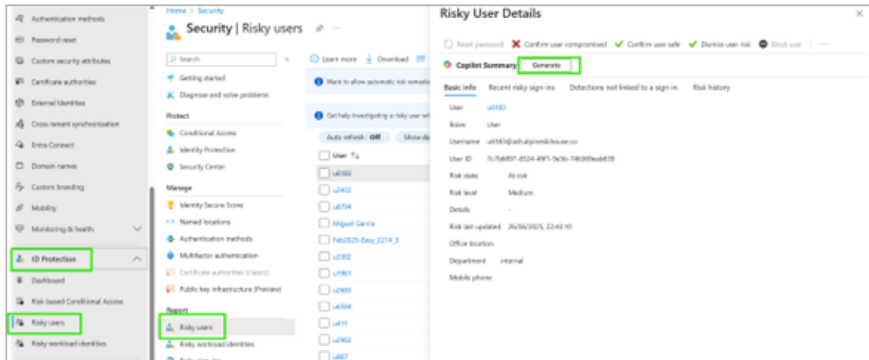

[Microsoft Security Copilot scenarios in Microsoft Entra ID Protection | Microsoft Learn](#)

Exercise 2a: Risky User Summarization

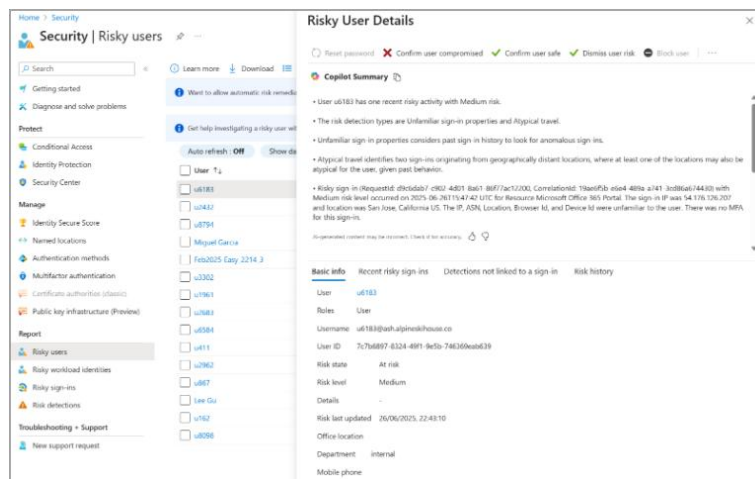

Risky user summarization provides admins and responders quick access to the most critical information in context to aid their investigation.

- Go to the **Entra portal** (<https://entra.microsoft.com/>) and sign in with your credentials.
- Scroll down on the left-hand nav bar, expand "Protection" and then click on "Risky Users"

Security Copilot in Microsoft Entra – Lab Guide

- Click on a user from the list to see risky summary by Copilot > Click **Generate** button

Note: If no user is available, adjust the Risky Level filter to include Low Risk.

- Copilot will return an analysis of what happened, and how best to mitigate and remedy the situation.

Exercise 2b: Risky User Investigation

In this exercise you will learn how to identify and investigate risky users using Microsoft Entra.

- Try out a few of the below prompts:
 - Provide a count of all risky users.
 - List all users currently flagged as risky.
 - Tell me more about user <UPN> / <Email Address>
 - Tell me about <User> recent sign ins
 - What authentication methods are set up for the above user?

Security Copilot in Microsoft Entra – Lab Guide

- f. Did the above user have any failed sign-ins during the last 14 days? If yes, list the location and IP address of each failed sign-in attempt.
- g. Show audit logs for the above user for the last 14 days.

Using Security Copilot, you gathered comprehensive information about the user, including sign-in activities, audit logs, and risky user detections.

After completing your investigation, a Tier 2 analyst needs to take action to remediate or unblock the risky user.

2. In the same session, Try:
 - a. **Write a report** based on this investigation. Provide your assessment of the user's risk level with supporting evidence and confidence level. List the most notable facts from this session as bullet points, along with supporting reasons. The audience is a Tier 2 SOC analyst who needs to take action to remediate or unblock the risky user. Include recommendations on how to proceed with user risk remediation in Entra

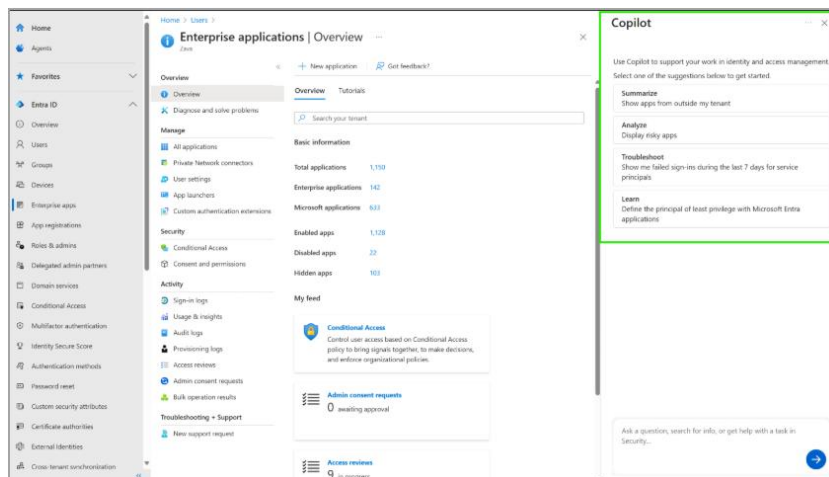

Exercise 2c: Application Risk Investigation

Identity administrators and security analysts can use Microsoft Security Copilot to quickly assess the risk level of applications from workload identities. [Investigate app risk using Microsoft Security Copilot | Microsoft Learn](#)

1. Go to the Entra portal (<https://entra.microsoft.com/>) and sign in with your credentials.
2. Got to Enterprise Apps

3. Click on the top right side of the portal.

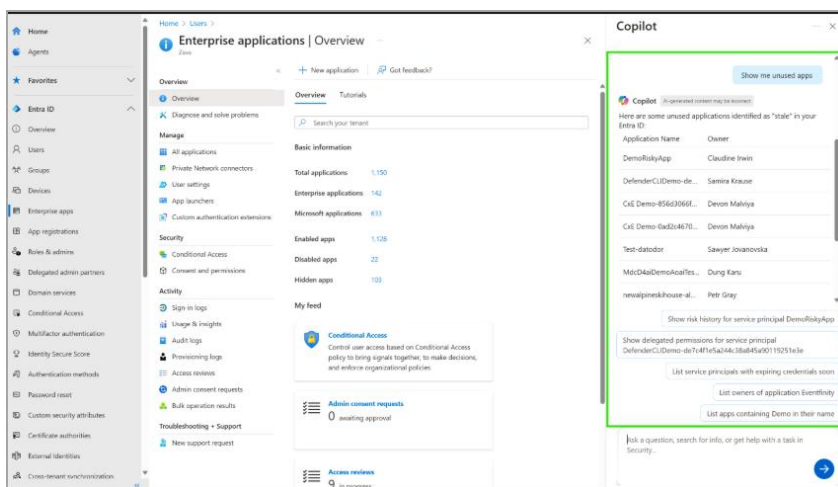

Notice how the starter prompts adapt depending on where in the Entra portal you have started your session.

4. Try out a few of the below prompts

Security Copilot in Microsoft Entra – Lab Guide

- Show me stale or unused apps
- Show me apps outside my tenant.
- Which permissions granted to this app are highly privileged?
- How many apps are from outside my tenant?
- Show me risky apps.
- List the apps with Risk State "Confirmed compromise".
- Give me a list of owners for these apps

Microsoft Entra ID Governance scenarios (10 mins)

Microsoft Entra ID Governance helps you manage identity lifecycle and access governance at scale. Security Copilot enhances these capabilities for:

- Access reviews:** Analyze access review data and decision patterns
- Entitlement management:** Manage access packages and connected organizations
- Privileged Identity Management:** Monitor privileged access and role assignments
- Lifecycle workflows:** Configure and troubleshoot employee lifecycle automation

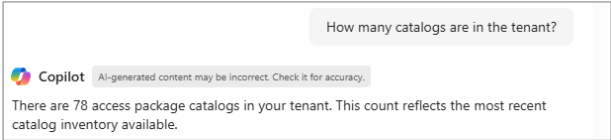

[Microsoft Security Copilot scenarios in Microsoft Entra ID Governance | Microsoft Learn](#)

Exercise 3a: Governance and optimization

Implement comprehensive governance and continuously optimize their Microsoft Entra environment using natural language queries.

- Try out a few of the below prompts
 - Show me the top 10 pending access reviews.
 - Who are the configured reviewers for the <Insert Access Review Title> review?
 - How many catalogs are in the tenant?
 - Find all access packages where the name contains "Sales"?
 - What access package assignments does <Insert User Display Name> have?

f. Who are the sponsors for connected organization <Insert Name>?

Exercise 3b: Lifecycle Workflows

Prerequisites

Scenario	Role	License	Tenant
Access reviews	Identity Governance Administrator	Microsoft Entra ID P2 license	Any with access reviews configured
Entitlement management	Identity Governance Administrator	Microsoft Entra ID P2 license	Any with entitlement management configured
Privileged Identity Management (PIM)	Security Administrator Global Reader Security Reader	Microsoft Entra ID P2 license	Any with PIM configured
Lifecycle workflows	Lifecycle Workflows Administrator	Microsoft Entra ID Governance license	Any with lifecycle workflows configured

[Microsoft Security Copilot scenarios in Microsoft Entra ID Governance | Microsoft Learn](#)

Customize workflows more efficiently using natural language to configure workflow information including custom tasks, execute workflows, and get workflow insights.

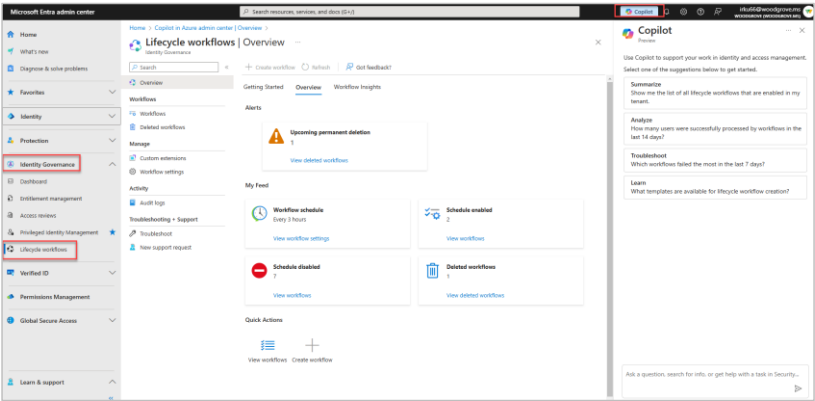

1. Try out a few of the below prompts
- a. List all lifecycle workflows in my tenant

b. List all disabled lifecycle workflows in my tenant.

c. Which users failed to be processed by this workflow in the last 7 days?

d. Which tasks failed the most in the last 30 days?

e. 9 in the last 7 days?

Microsoft Entra Internet Access and Private Access scenarios (5 mins)

Investigate and monitor network traffic usage and behavior using natural language queries. You can analyze user, device, and branch network usage, identify network issues, and detect threats or policy violations in real time. As a result, your investigation process is streamlined and more effective.

Prerequisites

Scenario	Role(s)	License	Tenant
Global Secure Access	Security Administrator Global Reader Global Secure Access Administrator Global Secure Access Log Reader	Microsoft Entra ID P1 or P2 license Entra Private Access License (for private access traffic) Entra Internet Access License (for general internet traffic outside Microsoft services)	Global Secure Access configured

[Microsoft Security Copilot scenarios in Microsoft Entra Internet and Private Access | Microsoft Learn](#)

Exercise 4a: Monitor and investigate

1. Try out a few of the below prompts
- Summarize blocked traffic and explain why it was blocked

Show the top 5 users with the highest data consumption in the last day.

List the top 10 accessed applications names in the last week based on network traffic logs.

List all applications with high-risk scores accessed in the last 24 hours based on network traffic logs.

List all applications names that user <Insert user UPN> has accessed in the last 24 hours based on network traffic logs.

Show all cross-tenant traffic to tenant <Insert Tenant GUID> in the last 7 days based on network traffic logs.

Security Copilot in Microsoft Entra – Lab Guide

Show the top 5 users with the highest data consumption in the last day.

Copilot

AI-generated content may be incorrect. Check it for accuracy.

Here are the top 5 users with the highest data consumption (sent bytes) in the last day:

User	Sent Bytes	Received Bytes	Destination
yima@Woodgrove.net	1,139,062	7,605	eastus2-shared.prod.warm.inges t.monitor.core.windows. net
mais19@woodgrove.ms	1,135,661	7,734	eastus2-shared.prod.warm.inges t.monitor.core.windows. net
mais19@woodgrove.ms	949,519	8,153	browser.events.data.mic rosoft.com
mais19@woodgrove.ms	844,375	9,014	browser.events.data.mic rosoft.com
kan320@woodgrove.ms	706,058	9,399	us- v20.events.data.microso ft.com

◀ ▶

This table highlights the top 5 user traffic log entries by sent bytes over the last day.

Section 2: Entra Agent in Microsoft Entra

Exercise 5: Conditional Access Optimization Agent (20mins)

In this exercise, you will learn how the Microsoft Entra Conditional Access (CA) Optimization Agent works, review its suggestions, analyze activity logs, and explore settings (without making changes). This agent helps ensure that all users and applications are protected by Conditional Access policies by recommending changes aligned with Microsoft Zero Trust best practices.

[Microsoft Entra Conditional Access optimization agent - Microsoft Entra ID | Microsoft Learn](#)

Prerequisites

- You must have at least the [Microsoft Entra ID P1](#) license.
- You must have available [security compute units \(SCU\)](#).
 - On average, each agent run consumes less than one SCU.
- You must have the appropriate Microsoft Entra role.
 - [Security Administrator](#) is required to *activate the agent the first time*.
 - [Security Reader](#) and [Global Reader](#) roles can *view the agent and any suggestions, but can't take any actions*.
 - [Conditional Access Administrator](#) and [Security Administrator](#) roles can *view the agent and take action on the suggestions*.
 - You can assign [Conditional Access Administrators](#) with Security Copilot access, which gives your Conditional Access Administrators the ability to use the agent as well.
 - For more information, see [Assign Security Copilot access](#).
- Device-based controls require [Microsoft Intune licenses](#).

Locate the Agent overview

1. Sign in to the Microsoft Entra admin center (<https://entra.microsoft.com/>) using your credentials.
2. Select **Agents** from the left navigation menu and then press **View details**

a.

b.

3. The Agent **Overview** pane provides a holistic view, showing whether the agent is active, listing suggestions for your review based on scans of new users and applications added in the last 24 hours, and highlighting recent activity performed by the agent.

The agent is next scheduled to run on August 12, 2025 at 4:13 AM

About this agent

The agent scans all new users and apps added in the last 24 hours to assess their applicability to Conditional Access policies enforcing multifactor authentication, device compliance, and blocking legacy authentication and device code flow. It reviews existing enabled policies to suggest consolidations, recommends changes aligned with Zero Trust best practices, and creates new policies in report-only mode. The agent will not add new users to existing policies or turn on new policies without your approval. [Learn more about this agent.](#)

a.

- From the list, choose a suggestion relevant to your environment (e.g., *Add 1 user to existing policy Require password change on Risky Sign-in.*) by selecting **Review suggestion**.

The actual suggestion you see may differ based on your tenant's configuration and findings, but the process of accessing and exploring them remains the same.

Security Copilot in Microsoft Entra – Lab Guide

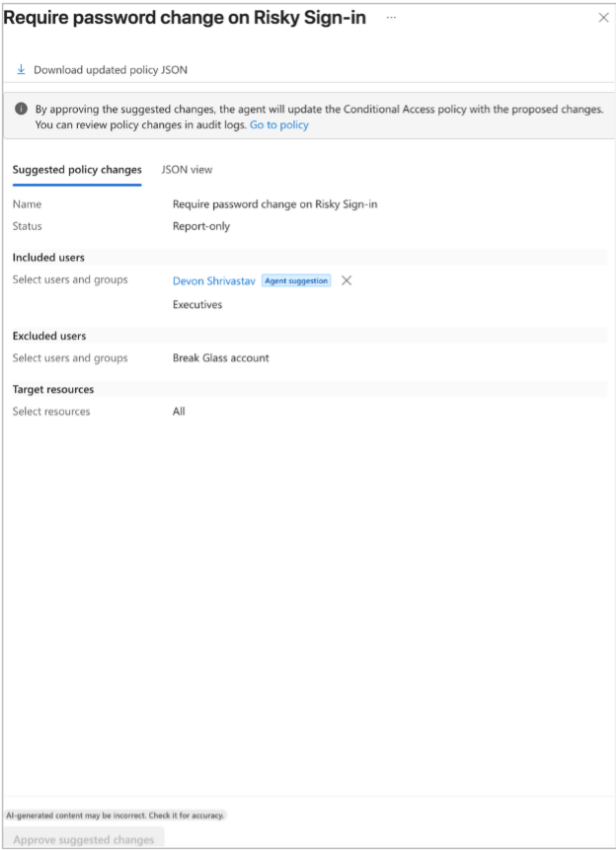

3. Notice the **State** field, which indicates **Report-only** meaning the policy is evaluated but not enforced.

The agent does not make any changes to existing policies unless a suggestion is explicitly approved by an administrator, and all new policies it suggests are created in report-only mode.

4. To view the recommended Conditional Access policy changes, select **Review policy changes**. This opens a pane showing the specific updates proposed by the agent.

*You will not make any changes in this exercise, but the option **Approve suggested changes** is available to administrators.*

Add 1 user to existing policy Require password change on Risky Sign-in.

Conditional Access Optimization Agent

The agent found 1 user that is not in scope of the existing enabled policy Require password change on Risky Sign-in, which already requires password change for high risk users. It is recommended to include this user to ensure consistent enforcement.

User impact

This policy requires users identified as high risk to change their password and complete multifactor authentication, reducing the risk of account compromise.

Agent activity

Summary of agent activity 1+

Conditional Access Optimization agent scanned the Zava tenant starting on August 11, 2025 at 4:14:50 AM CDT. The agent completed run on August 11, 2025 at 4:15:13 AM CDT and identified 1 new user and 1 new application were added in the last 24 hours. The agent generated 0 new policies in report-only mode and **4 policy update suggestions** based on Zero Trust best practices for your review.

The agent also reviewed **all 35 existing CA policies** and found no overlapping scopes that warranted consolidation at this time.

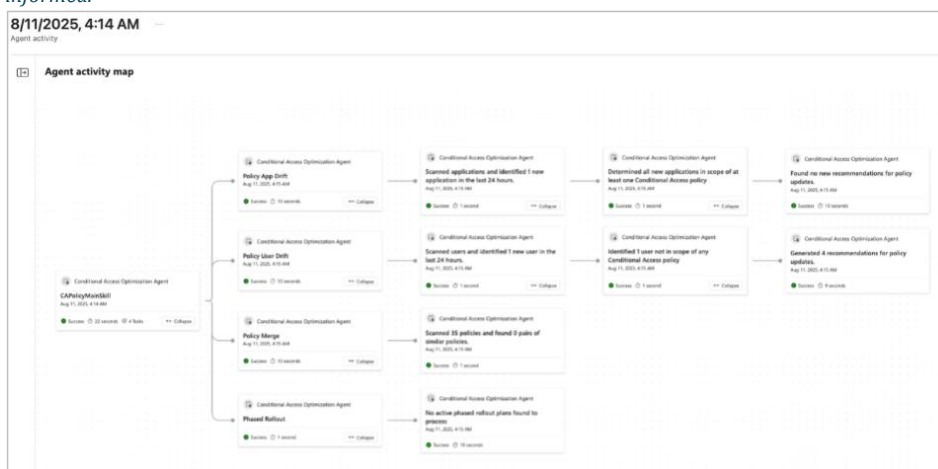

The agent found:

- 1 new user unprotected by your tenant's Conditional Access policies.
- No new applications unprotected.

AI-generated content may be incorrect. Verify it for accuracy. 👍 👎

4. Next to the **Summary of agent activity** is the **Agent activity map** on the **Agent activity** page which outlines each step the agent performed and its outcomes in a workflow-style chart.

Illustrating the process and helping you understand the rationale behind the suggestion, so you are better informed.

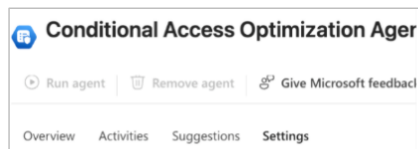

Exploring Agent Settings

The CA optimization agent includes several settings that can be used to adjust its behavior, which you will explore next. No changes will be made to these settings in this exercise.

Security Copilot in Microsoft Entra – Lab Guide

1. From the top pane, select the **Settings** option. This page contains various configuration options, explained below.

Keep in mind that new agent settings are continually being added, so your view may differ slightly.

2. **Trigger:** By default, the agent runs every 24 hours.

Trigger
☒ Schedule the agent to run every 24 hours.

This setting can be adjusted to disable the automatic schedule and allow the agent to run only on demand.

3. **Agent capabilities:** Controls whether the agent can automatically create new Conditional Access policies in report-only mode when it identifies suggestions, allowing impact assessment before enforcement.

Agent capabilities
When the agent identifies policy change suggestions, it can create new Conditional Access policies in report-only mode.
☒ Allow agent to autonomously create new policies in report-only mode

4. **Microsoft Entra objects to monitor:**

Microsoft Entra objects to monitor
Select which new objects (created in the last 24 hours) the agent should check for changes:
☒ Users
☒ Applications

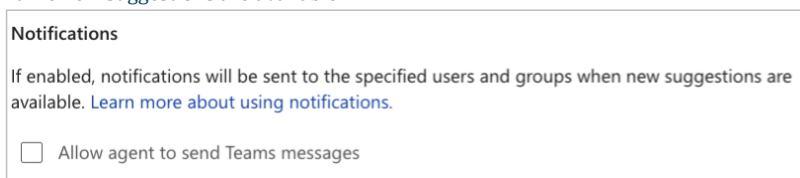

- a. *This setting specifies what the agent focuses on by selecting specific object types or both. It can be configured to monitor only newly created user accounts, only newly registered applications, or both*

Disabling autonomous creation will keep the agent in an advisory role, providing recommendations without creating any policies in report-only mode.

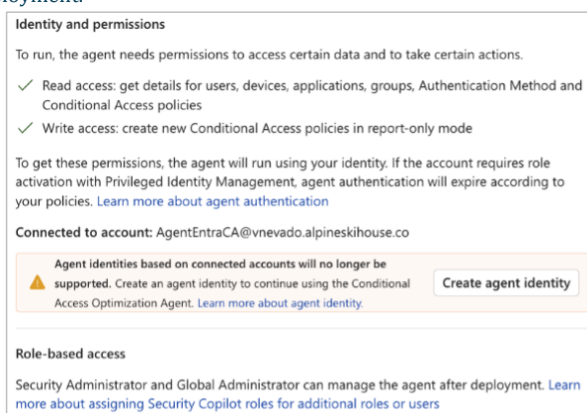

5. **Phased rollout (preview):** Describes the agent's ability to deploy Conditional Access policies gradually, starting with lower-impact groups and progressing to higher-impact ones over multiple phases.

6. **Notifications:** When this setting is enabled, the selected users and groups will receive notifications each time new suggestions are available.

7. **Identity and permissions/Role-based access:** Explains the access the agent requires, how it uses the signed-in user's identity to operate, and which roles are authorized to manage it after deployment.

8. **Custom Instructions:** Tailor the agent's behavior by specifying which users, groups, or roles to include or exclude, and by adding exceptions for certain policy types such as MFA.

It also supports using validated object IDs for precise targeting, enabling more tailored and accurate policy recommendations. More information is available in

Conditional Access Optimization Agent Knowledge Base (Preview)

Enables you to tailor Conditional Access recommendations to your organization's standards. By uploading a document that defines your policy naming conventions, persona-based policies, and breakglass exclusions, the agent incorporates your internal governance patterns—producing more accurate, context-aware recommendations aligned with how Conditional Access is managed in your tenant. More information is available [here](#).

Note: You will have to create a doc that is personalized to your tenant (for example, if the doc says "always exclude breakglassaccount123@contoso.com" that user needs to exist in your tenant).

Please find an example doc for you to get started.

Section 3: Open chat experience in Security Copilot Standalone (5 mins)

1. Go to [Microsoft Security Copilot](https://securitycopilot.microsoft.com/) (<https://securitycopilot.microsoft.com/>)
2. In the “Prompts to try”, to filter to Entra prompts, under Role, Select **Identity Administrator**.

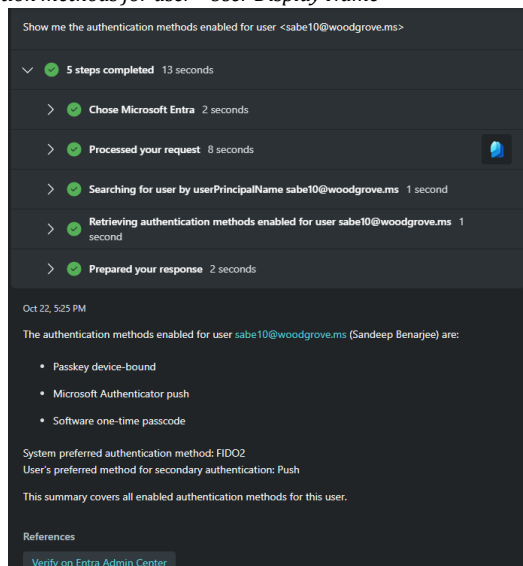

Try out a few prompts by clicking on them.

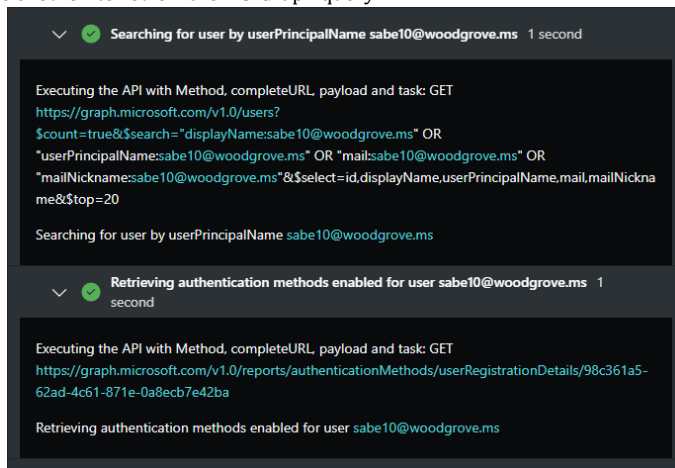

3. In the **Prompt bar** at the bottom, try out a few additional prompts
 - a. *How many users failed sign-in during the past 24 hours*

- b. *List the authentication methods for user <User Display Name>*

- c. Expand the chevron to review the MS-Graph query.

4. **Promptbooks** - Security Copilot comes with prebuilt promptbooks, a series of prompts that have been put together to accomplish specific security-related tasks. [Use promptbooks in Microsoft Security Copilot | Microsoft Learn](#)
- a. Try out: **Microsoft User analysis**

The screenshot shows the 'Microsoft User Analysis' promptbook interface. It features a title bar with a Microsoft logo and a 'Submit' button. Below the title is a subtitle: 'Get detailed analysis on any user, including their Intune managed devices, authentication me...'. The main section contains a form with two input fields: 'User UPN' and 'duration'. Below these fields is a list of eight numbered prompts for analysis:

- 1 Tell me more about <User_UPN>?
- 2 What devices are associated with the above user?
- 3 Show me the last login for the above user during the last <duration>.
- 4 What authentication methods are set up for the above user?
- 5 Did the above user have any failed sign-ins during the last <duration>? If yes, list the location and IP address of each failed sign-attempt.
- 6 Show audit logs for the above user in the last <duration>.
- 7 From Purview, list the activities performed by above user in the last <duration>.
- 8 Show Defender identity summary for the above user.
